

COSA State Logic

(Temporal Logic)

The logic in this state diagram is easy to follow. Entering the first operand starts at trace 100 and continues through trace 106. When done entering the number select one of the operators with trace 500 through trace 503. Then enter the second operand starting at trace 700 through trace 706. When a Clear, Clear Entry, Equals, Percent, or another operator is entered the state logic transitions from trace 700 to trace 900 through trace 902. No state has more than 2 lines exiting (true and false).
